

Abstract of the Disclosure

A test kit for collection of an environmental sample for subsequent analysis comprises a test tape and a microscopic-type slide releasably attached to a mailing placard. The tape has a releasable adhesive on one side thereof with a window therein. Upon removal of the tape from the slide the window is pressed against the sample. A grid within the window enhances location and viewing of the specimen affixed within the window. Upon reattachment of the tape to the slide, the placard is transported for subsequent microscopic analysis. Upon release from the placard, the slide is ready for microscopic viewing. The placard includes indicia thereon for a desired alignment of the test tapes on the slide. The tape includes an adhesive free tab for enhancing handling.
